```jsx
import React from 'react';
import { Spin } from 'antd';
import PropTypes from 'prop-types'
import { LoadingOutlined } from '@ant-design/icons';

const Icon = <LoadingOutlined style={{ fontSize: 35 }} spin />

const Loading = (props) => {
        const { align, cover } = props
        return (
                <div className={`loading text-${align} cover-${cover}`}>
                        <Spin indicator={Icon} />
                </div>
        )
}

Loading.propTypes = {
        size: PropTypes.string,
        cover: PropTypes.string
}

Loading.defaultProps = {
        align: 'center',
        cover: 'inline'
};

export default Loading
```
